## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-2 and 10-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Itoh et al. (US 2004/0170050). Figure 1 shows a half rail differential driver circuit comprising a first supply voltage (VDD), a differential line pair (IO(1), IO(1)/), said differential line pair comprising a first line terminal and a second line terminal, said first line terminal and said second line terminal being shorted together during a precharge phase of operation of said half rail differential driver circuit such that said first line terminal and said second line terminal are charged to half said first supply voltage (during precharge transistors Q1 and Q2 are on, first and second line terminals IO(1) and IO(1)/ tied to Vdd/2) as called for in claims 1 and 10.

3. Regarding claims 2 and 11, figure 1 shows a half rail differential driver circuit comprising a first supply voltage (VDD), an IN terminal and INBAR terminal (IO(1), IO(1)/), out terminal and OUTBAR terminals (junctions of transistors QP1, QN1; QP2, QN2), during a precharge phase of operation of said half rail differential driver circuit said IN terminal and INBAR terminal (IO(1), IO(1)/), out terminal and OUTBAR terminals (junctions of transistors QP1, QN1; QP2, QN2) are charged to half said first supply voltage (during precharge transistors

Q1 and Q2 are on, first and second line terminals IO(1) and IO(1)/ and junctions of transistors QP1, QN1; QP2, QN2 are tied to Vdd/2).

*Allowable Subject Matter*

4. Claims 3-9 and 12 are presently allowed.

*Conclusion*

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. In this regard, applicant's cited prior art has been carefully considered.
